

VICE PRESIDENT, DELIVERY OPERATIONS  
HEADQUARTERS

August 11, 2023

TO: VICE PRESIDENTS, AREA RETAIL AND DELIVERY OPERATIONS  
DISTRICT MANAGERS  
PCES POSTMASTERS

SUBJECT: RADAR Volumes

The Rural Route Evaluated Compensation System (RRECS), established new standards and leverages automated and manually entered data such as mail volumes, scan activity and digital route information to create accurate and responsive rural route evaluations.

A report was established in Retail and Delivery Applications & Reports (RADAR) to help validate the automatically entered data.

Management in every office with rural carriers must pull and post the RRECS Volume report (found in RADAR) for their office once per delivery day and post in a prominent location within the delivery unit.

Important things to keep in mind:

Master/Sub routes (routes with two ZIP Codes) or Parent/Child routes will show volume under the Master or Parent (main) route only, when properly linked by Address Management Systems.

Due to circumstances including plant or transportation delays, as well as cutoff times, which vary from plant to plant, the mail volume report may reflect different volumes day to day. It is recommended that you compare volumes week to week or month to month and have a three-day minimum for volume comparison.

The path to the RADAR RRECS Volume Report is: [Blue.usps.gov](https://blue.usps.gov) > Essential Links > RADAR > Function 2 > Reports > RRECS Volume.

Thank you,
